NEWBORN ICU MINI ROTATION

The faculty coordinator for this subspecialty service is Dr. J. Ross Milley. Questions about the service, and suggestions concerning it, should be directed to him (581-7085) or Dr. Chris Maloney (588-2257).

On the first day of the service report to University Hospital, Newborn ICU (2nd floor, UUMC) at 8:00 a.m. Ask the Health Unit Coordinator there to direct you to the attending in charge of the Residents’ Service.

A general outline of the schedule of the University Hospital Residents’ Service is enclosed. This is meant to be a guideline and will vary somewhat depending on attending preference. Check with your attending about his/her plans for rounds, their organization, and other scheduled events that may occur during your rotation that would be beneficial to your training. We will expect your attendance in the Newborn ICU from Monday-Saturday unless your week is the last of the rotation, in which case your experience will end on Friday.

GOALS

During a one-week rotation in the Newborn ICU the student should begin to understand general aspects of the care of the newborn, including the uniqueness of the newborn as a patient, (i.e., the difference between newborn pathophysiology and that of older patients.) Differences should also be apparent between the therapies available to remedy neonatal conditions and those used later in life. Finally, the social and ethical considerations important to the care of the newborn and the care of their parents should become apparent.

METHODS

The student will achieve the above goals by:

1. Becoming an active participant in working and attending rounds on the Residents’ Service in the Newborn ICU at University Hospital

2. Attending additional conferences at the discretion of the attending on service.

3. Reading materials selected by the attendings, fellows, and residents on that service.
