Research Events

Grant Writing Workshops: The Department of Pediatrics and the PCMC Foundation sponsor a three-day grant writing workshop biannually (April and November). Participants must bring a work-in-progress and are accepted on a space available basis (limit of 12). The workshop focuses on preparing NIH-style proposals although participants may bring a proposal for another funding agency. Training includes presentations on career development, how to write for NIH funding, and study design/data interpretation. Participants have significant writing time and opportunities to seek feedback from senior investigators. The writing/editing process continues throughout the weekend and culminates in a peer review similar to reviews conducted at the NIH. Program Contact: Jackie Hinton 801.587.8968 jackie.hinton@hsc.utah.edu

Research-in-Progress (RIP) sponsored by the Department of Pediatrics: A weekly interdisciplinary presentation of ongoing research by Pediatrics fellows, new investigators, and faculty engaged in basic, clinical, and translational research. Audience: Faculty, fellows, residents and staff. For more information, please contact Daniel Freed at 801.213.4116 or daniel.freed@hsc.utah.edu

PCAT Scholar Educational Seminars: Monthly educational/training seminars are held for the PCAT scholars and other interested faculty. The dates and times vary each month to accommodate scholars’ clinic schedules. Selected seminar topics aim to prepare scholars for a successful research career. Presentations include topics such as internal and external research resources, compliance issues, leadership skills, research ethics, and responding to media.
